

Unlock the Full Power of Engineering Research Tools

Did you know that you already have access to Engineering databases through your institution?

Whether you're tackling a design project, working on a thesis, or conducting advanced engineering research, these sessions will show you practical ways to get more value from tools you already have access to.

ELSEVIER

Advancing human progress together

Join hands-on training sessions designed specifically for engineering students, researchers, and academics who want to work faster, design smarter, and base their decisions on trusted, validated engineering data.

Why attend?

Move beyond basic searching and show you how to:

- ✓ Find reliable engineering data you can confidently use in assignments, research, and design work
- ✓ Access handbooks, standards, material properties, equations, and technical references in one place
- ✓ Save time by using advanced search and data visualisation tools
- ✓ Support design, simulation, and problem-solving with authoritative, peer-reviewed content
- ✓ Strengthen your research outputs and improve the quality and credibility of your work

We warmly invite you to register for these sessions:

Why Knovel?

All your engineering answers in one place.

Find trusted formulas, material properties, standards, and handbooks — no more jumping between random websites or unreliable sources.

Work faster and smarter

Use powerful search, interactive graphs, tables, and equations to quickly get data you can apply directly to assignments, design projects, and research.

Build real-world engineering skills

Learn to use the same tools and data relied on by professional engineers, helping you produce better work and prepare for industry and postgraduate research.

We warmly invite you to register for these sessions:

Why Engineering Village?

Find the best engineering research, fast

Search a huge collection of trusted engineering journals and conference papers (including Compendex) so you can spend less time searching and more time understanding the research.

Improve your assignments and literature reviews

Discover high-quality, peer-reviewed sources that lecturers expect, helping you build strong literature reviews and properly support your arguments.

Build research skills used by real engineers

Learn advanced search and filtering skills used by researchers and professionals worldwide — ideal for final-year projects, postgraduate studies, and research careers.
